

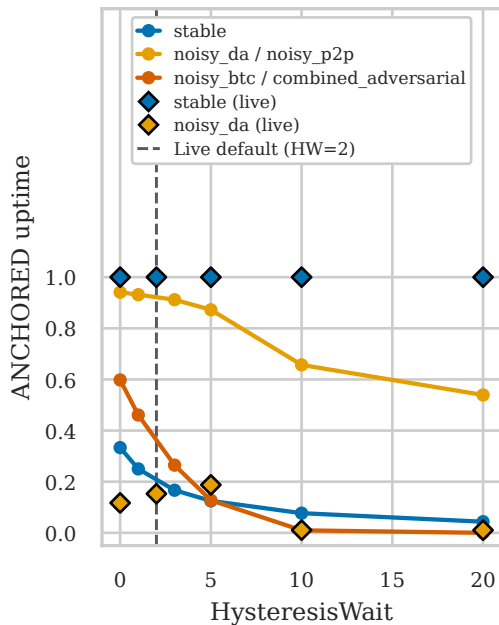

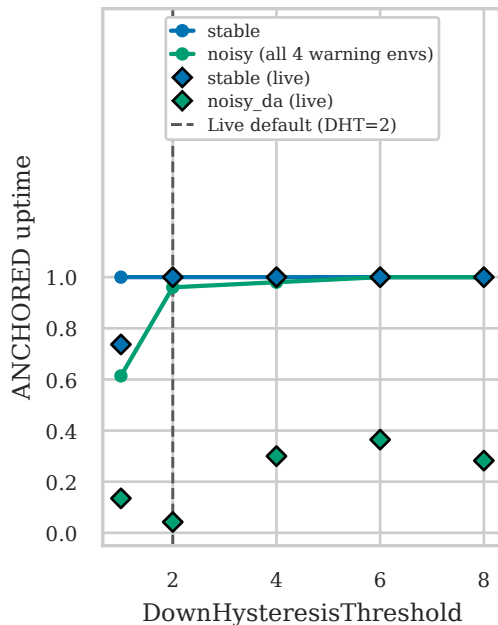

Figure 4: FSM Hysteresis Parameter Sweeps and System Trade-offs Across Fault Environments

lines = in-process sweep; diamonds = real live spot-checks (divergence is real, not noise); dashed line = real production default (=2)

**(a) Up-Hysteresis:
Mitigating Flapping**

**(b) Down-Hysteresis:
Noise Absorption**

**(c) Suspicious-Exit:
The Tuning Trade-off**
